

# SRX5400, SRX5600, AND SRX5800 SERVICES GATEWAYS

## Product Overview

SRX Series Services Gateways are next-generation security platforms based on a revolutionary architecture offering outstanding protection, performance, scalability, availability, and security service integration. Custom designed for flexible processing scalability, I/O scalability, and services integration, the SRX Series exceeds the security requirements of data center consolidation and services aggregation. The SRX Series is powered by Junos OS, the same industry-leading operating system platform that keeps the world's largest networks available, manageable, and secure for the data center.

## Product Description

The Juniper Networks® SRX5400, SRX5600, and SRX5800 Services Gateways are next-generation security platforms based on a revolutionary architecture that provides market-leading performance, scalability, and service integration. These devices are ideally suited for service provider, large enterprise, and public sector networks, including:

- Cloud and hosting provider data centers
- Mobile operator environments
- Managed service providers
- Core service provider infrastructures
- Large enterprise data centers

Based on Juniper's dynamic services architecture, the SRX5000 line provides unrivaled scalability and performance. Each services gateway can support near linear scalability, with the addition of Services Processing Cards (SPCs) enabling a fully equipped SRX5800 to support up to 300 Gbps firewall throughput. The SPCs are designed to support a wide range of services, enabling future support of new capabilities without the need for service-specific hardware. Using SPCs on all services ensures that there are no idle resources based on specific services being used—maximizing hardware utilization.

The scalability and flexibility of the SRX5000 line is supported by equally robust interfaces. The SRX5000 line employs a modular approach to interfaces, where each platform can be equipped with a flexible number of input/output cards (IOCs) that offer a wide range of connectivity options—from 1GbE to 100GbE interfaces. With the IOCs sharing the same interface slot as the SPCs, the gateway can be configured as needed to support the ideal balance of processing and I/O. Hence, each deployment of the SRX Series can be tailored to specific network requirements. With this flexibility, the SRX5800 can be configured to support more than 400GbE ports, or 220 10GbE, 22 100GbE, or 44 40GbE ports.

The scalability of both SPCs and IOCs in the SRX5000 line is enabled by the custom designed switch fabric. Supporting up to 960 Gbps of data transfer, the fabric enables realization of maximum processing and I/O capability available in any particular configuration. This level of scalability and flexibility facilitates future expansion and growth of the network infrastructure, providing unrivaled investment protection.

The tight service integration on the SRX Series is enabled by Juniper Networks Junos® operating system. The SRX Series is equipped with a robust list of services that include firewall, intrusion prevention system (IPS), denial of service (DoS), application security, VPN (IPsec), Network Address Translation (NAT), unified threat management (UTM), and quality of service (QoS). In addition to the benefit of individual services, the SRX5K series offers an ultra-low latency solution.

Junos OS also delivers carrier-class reliability (with six nines system availability). Furthermore, the SRX Series enjoys the benefit of a single source OS, and single integrated architecture traditionally available on Juniper's carrier-class routers and switches.

## SRX5800

The SRX5800 Services Gateway is the market-leading security solution supporting up to 300 Gbps firewall, 100 million concurrent sessions, 100 Gbps IPS, and 450,000 connections per second. Equipped with the full range of security services, SRX5800 is ideally suited for securing large enterprise, hosted or co-located data centers, service provider core and cloud provider infrastructures, and mobile operator environments. The massive performance, scalability, and flexibility of the SRX5800 makes it ideal for densely consolidated processing environments, and the service density make it ideal for cloud and managed service providers.

## SRX5600

The SRX5600 Services Gateway uses the same SPCs and IOCs as the SRX5800 and can support up to 130 Gbps firewall and 60 Gbps IPS. The SRX5600 is ideally suited for securing enterprise data centers as well as aggregation of various security solutions. The capability to support unique security policies per zones and its ability to scale with the growth of the network infrastructure makes the SRX5600 an ideal deployment for consolidation of services in large enterprise, service provider, or mobile operator environments.

## SRX5400

The SRX5400 Services Gateway uses the IOCII and SPCII and can support up to 65 Gbps firewall and 22 Gbps IPS. The SRX5400 is a small footprint, high-performance gateway ideally suited for securing large enterprise campuses as well as data centers, either for edge or core security deployments. The capability to support unique security policies per zone and a compelling price/performance/footprint ratio make the SRX5400 an optimal solution for edge or data center services in large enterprise, service provider, or mobile operator environments.

## Service Processing Cards

As the “brains” behind the SRX5000 line, SPCs are designed to process all available services on the platform. Without the need for dedicated hardware for specific services or capabilities, there are no instances in which a piece of hardware is taxed to the limit while other hardware is sitting idle. SPCs are designed to be pooled together, allowing the SRX5000 line to expand performance and capacities with the introduction of additional SPCs, drastically reducing management overhead and complexity. The same SPCs are supported on both SRX5600 and SRX5800 Services Gateways.

Juniper offers the SPCII, a newer SPC with superior performance and scale. The SPCII also features in-service software and in-service hardware upgrades to ensure that security is always on. The SPCII is supported on the SRX5400, SRX5600, and SRX5800 Services Gateways.

## Input Output Cards

To provide the most flexible solution, the SRX5000 line employs the same modular architecture for SPCs and IOCs. The SRX5000 line can be equipped with one or several IOCs, supporting the ideal mix of interfaces. With the flexibility to install an IOC or an SPC on any available slot, the SRX5000 line can be equipped to support the perfect blend of interfaces and processing capabilities to meet the needs of the most demanding environments.

Juniper offers the IOCII, a newer card with superior connectivity options. The IOCII offers the industry's first 100GbE as well as 40GbE and high-density 10GbE and also 1GbE connectivity options. These options reduce the need for link aggregation when connecting high throughput switches to the firewall, as well as enabling increased throughput in the firewall itself. The IOCII is supported on all three platforms in the SRX5000 line of services gateways.

## Features and Benefits

### Networking and Security

Juniper Networks SRX5000 line has been designed from the ground up to offer robust networking and security services.

Feature	Feature Description	Benefits
Purpose-built platform	Built from the ground up on dedicated hardware designed for networking and security services.	Delivers unrivaled performance and flexibility to protect high-speed network environments.
Scalable performance	Offers scalable processing based on the Dynamic Services Architecture.	Simple and cost-effective solution to leverage new services with appropriate processing.
System and network resiliency	Provides carrier-class hardware design and proven OS.	Offers the reliability needed for any critical high-speed network deployments without service interruption. Utilizes a unique architectural design based on multiple processing cores and a separation of the data and control planes.
High availability (HA)	Active/passive and active/active HA configurations using dedicated high availability interfaces.	Achieve availability and resiliency necessary for critical networks.
Interface flexibility	Offers flexible I/O options with modular cards based on the Dynamic Services Architecture.	Offers flexible I/O configuration and independent I/O scalability (options include 1, 10, 40, and 100GbE) to meet the port density requirements of demanding network environments.
Network segmentation	Security zones, virtual LANs (VLANs), and virtual routers that allow administrators to deploy security policies to isolate subnetworks and use overlapping IP address ranges.	Features the capability to tailor unique security and networking policies for various internal, external, and demilitarized zone (DMZ) subgroups.
Robust routing engine	Dedicated routing engine that provides physical and logical separation to data and control planes.	Enables deployment of consolidated routing and security devices, as well as ensuring the security of routing infrastructure—all via a dedicated management environment.
AppTrack	Detailed analysis on application volume/usage throughout the network based on bytes, packets and sessions.	Provides the ability to track application usage to help identify high-risk applications and analyze traffic patterns for improved network management and control.
AppFirewall	Fine grained application control policies to allow or deny traffic based on dynamic application name or group names.	Enhances security policy creation and enforcement based on applications and user roles rather than traditional port and protocol analysis.
AppQoS	Leverage Juniper's rich QoS capabilities	Provides the ability to prioritize traffic as well as limit and shape bandwidth based on application information and contexts for improved application and overall network performance.
Application signatures	Open signature library for identifying applications and nested applications.	Applications are accurately identified and the resulting information can be used for visibility, enforcement, control and protection.
SSL Proxy (forward and reverse)	Performs SSL encryption and decryption between the client and the server	Combined with application identification, provides visibility and protection against threats embedded in SSL encrypted traffic.
Intrusion Prevention System (IPS)	Detects known and unknown exploits and anomalies in network traffic streams	Adds critical layer of protection beyond stateful firewall, enabling detection of vulnerabilities in network traffic and highly granular control over IPS policy enforcement
Stateful GPRS and SCTP inspection	Support for GPRS and SCTP firewall in mobile operator networks.	Enables the SRX5000 line to provide stateful firewall capabilities for protecting key GPRS nodes within mobile operator networks.
User identity-based access control enforcement	Secure access to data center resources via tight integration of standards-based access control capabilities of Juniper Networks Junos Pulse Access Control Service and SRX5000 line.	Enables agent-based and agentless identity security services for enterprise data centers by integrating the SRX5000 line with the standards-based access control capabilities of Junos Pulse Access Control Service. This integration enables administrative flexibility to manage a variety of user access, including corporate, guest, and mobile.
Unified threat management (UTM)	Strong UTM capabilities, including IPS, antivirus, antispam, Web, and content filtering. Available on-box with preinstalled, expanding and adaptive capabilities that are quickly activated for zero-day, easy, and instant protection. Antivirus options are available from Sophos, Web filtering from Websense, and antispam from Sophos.	Best-in-class UTM protection with strong, high-performance content security leveraging intelligence from multiple expert security companies.

## Networking and Security (continued)

Feature	Feature Description	Benefits
I/O card II supports 2 MICs	The first firewall I/O card in the industry to offer 100GbE connectivity. The card includes a choice of ten 10GbE, twenty 1 GbE, two 40GbE, or one 100GbE I/O interfaces. Pairs well with SPCIIIs for maximized firewall performance in any of the SRX5000 line of gateways.	Increases connectivity efficiency with high throughput I/O interfaces. Reduces the need for link aggregation to the firewall and enables higher firewall throughput.
SPC card II	Enables performance and scale with full, backwards compatibility to SRX5000 chassis and cards. Like current SPCs, these cards support in-service software and in-service hardware upgrades	Delivers always-on security resiliency to meet your growing network performance needs.
AutoVPN	One time hub configuration for site-to-site VPN for all spokes, even newly added ones. Configuration options include: routing, interfaces, IKE, and IPsec.	Enables IT administrative time and cost savings with easy, no-touch deployment for IPsec VPN networks.

## IPS Capabilities

Juniper Networks IPS capabilities offer several unique features that assure the highest level of network security.

Feature	Feature Description	Benefits
Stateful signature inspection	Signatures are applied only to relevant portions of the network traffic determined by the appropriate protocol context.	Minimize false positives and offer flexible signature development.
Protocol decodes	Enables most accurate detection and helps reduce false positives	Accuracy of signatures are improved through precise contexts of protocols.
Signatures	There are more than 8,500 signatures for identifying anomalies, attacks, spyware, and applications.	Attacks are accurately identified and attempts to exploit a known vulnerability are detected.
Traffic normalization	Reassembly, normalization, and protocol decoding are provided.	Overcome attempts to bypass other IPS detections by using obfuscation methods.
Zero-day protection	Protocol anomaly detection and same-day coverage for newly found vulnerabilities are provided.	Your network is already protected against any new exploits.
Recommended policy	Group of attack signatures are identified by Juniper Networks Security Team as critical for the typical enterprise to protect against.	Installation and maintenance are simplified while ensuring the highest network security.
Active/active traffic monitoring	IPS monitoring on active/active SRX5000 line chassis clusters.	Support for active/active IPS monitoring including advanced features such as in-service software upgrade.
Packet capture	IPS policy supports packet capture logging per rule.	Conduct further analysis of surrounding traffic and determine further steps to protect target.

## Content Security UTM Capabilities

The UTM services offered on the SRX5000 line of gateways include industry-leading antivirus, antispam, content filtering, and additional content security services.

Feature	Feature Description	Benefits
Antivirus	Antivirus includes reputation-enhanced, cloud-based antivirus capabilities that detect and block spyware, adware, viruses, keyloggers, and other malware over POP3 HTTP, SMTP, IMAP, and FTP protocols. This service is provided in cooperation with Sophos Labs, a dedicated security company.	Sophisticated protection from respected antivirus experts against malware attacks that can lead to data breaches and lost productivity.
Antispam	Multilayered spam protection, up-to-date phishing URL detection, standards-based S/MIME, Open PGP and TLS encryption, MIME type and extension blockers are provided in cooperation with Sophos Labs, a dedicated security company.	Protection against advanced persistent threats perpetrated through social networking attacks and the latest phishing scams with sophisticated e-mail filtering and content blockers.
Enhanced Web filtering	Enhanced Web filtering includes extensive category granulation (95+ categories) and a real-time threat score delivered with Websense, an expert Web security provider.	Protection against lost productivity and the impact of malicious URLs as well as helping to maintain network bandwidth for business essential traffic.
Content filtering	Effective content filtering based on MIME type, file extension, and protocol commands.	Protection against lost productivity and the impact of extraneous or malicious content on the network to help maintain bandwidth for business essential traffic.

## Centralized Management

Juniper Networks Junos Space Security Director delivers scalable and responsive security management that improves the reach, ease, and accuracy of security policy administration. It lets administrators manage all phases of the security policy lifecycle through a single Web-based interface, accessible via standard browsers. Junos Space Security Director centralizes application identification, firewall, IPS, NAT, and VPN security management for intuitive and quick policy administration.

Junos Space Security Director runs on the Junos Space Network Management Platform for highly extensible, network-wide management functionality, including ongoing access to Juniper and third-party Junos Space ecosystem innovations.

<sup>1</sup> Performance, capacity and features listed are based on systems running Junos OS 12.1X46 and are measured under ideal testing conditions. Actual results may vary based on Junos OS releases and by deployments.

**Note:** We are updating the branding on the SRX5000 line of products. The SRX5400 will ship with a carbon grey interface and current Juniper logo, however current line cards ordered will ship in the blue style faceplates at FRS. We are actively migrating all line cards over to carbon gray in mid 2014.

SRX5400BB-DC	SRX5400 base bundle includes Chassis, RE, SCB, two DC HC power supplies, SRX5K-SPC-4-15-320, SRX5K-MPC, and SRX-MIC-10XG-SFPP
SRX5400B2-AC	SRX5400 bundle 2 includes Chassis, RE, SCB, two AC HC power supplies, two SRX5K-SPC-4-15-320, SRX5K-MPC, and SRX-MIC-10XG-SFPP
SRX5400B2-DC	SRX5400 bundle 2 includes Chassis, RE, SCB, two DC HC power Supplies, two SRX5K-SPC-4-15-320, SRX5K-MPC, and SRX-MIC-10XG-SFPP
SRX5600BASE-HC-AC	AC SRX5600 chassis, includes RE, SCB, 2 AC high capacity power supplies
SRX5600BASE-HC-DC	DC SRX5600 chassis, includes RE, SCB, 2 DC high capacity power supplies
SRX5800BASE-HC-AC	AC SRX5800 chassis, includes RE, 2xSCB, 2 AC high capacity power supplies
SRX5800BASE-HC-DC	DC SRX5800 chassis, includes RE, 2xSCB, 2x high capacity DC power supplies

## SRX5000 Line Components

		Compatible Systems
SRX5K-SCB	SCB SRX5000 line Switch Control Board	SRX5400 SRX5600 SRX5800
SRX5K-RE-13-20	SRX5000 line Routing Engine, 1.3 GHz, 2 GB DRAM	SRX5400 SRX5600 SRX5800

Model Number	Description	
SRX5K-SPC-4-15-320	SRX5000 line Next-Generation Service Processing Card (featuring 20 million sessions)	SRX5400 SRX5600 SRX5800
SRX5K-SPC-2-10-40	SRX5000 line Service Processing Card	SRX5600 SRX5800
SRX5K-4XGE-XFP	4x10 Gigabit XFP Ethernet I/O Card for the SRX5000 line, no transceivers	SRX5600 SRX5800
SRX5K-40GE-SFP	40x1 Gigabit SFP Ethernet I/O Card for the SRX5000 line, no transceivers	SRX5600 SRX5800
SRX5K-FPC-IOC	SRX5000 line Flex IOC	SRX5600 SRX5800 Supports 2 Flex IOC modules
SRX-IOC-16GE-TX	SRX5000 line Flex IOC 16-port 10/100/1000 Ethernet module	Flex IOC module for SRX5k-FPC-IOC SRX5600 SRX5800
SRX-IOC-16GE-SFP	SRX5000 line Flex IOC 16-port SFP Ethernet module, no transceivers	Flex IOC module for SRX5k-FPC-IOC SRX5600 SRX5800
SRX-IOC-4XGE-XFP	SRX5000 line Flex IOC 4x10 Gigabit XFP Ethernet module, no transceivers	Flex IOC module for SRX5k-FPC-IOC SRX5600 SRX5800
SRX5K-IOC-BLANK	Blank Panel for SRX5K-FPC-IOC	SRX5600 SRX5800
SRX-5K-BLANK	Blank Panel for SRX5K	SRX5400 SRX5600 SRX5800

## Ordering Information (continued)

Model Number	Description	
SRX5K-MPC	MPC for 100GbE, 40GbE, 10GbE MIC Interfaces	SRX5400 SRX5600 SRX5800 Supports 2 MIC modules
SRX-MIC-1X100G-CFP	MIC with 1x100GbE CFP Interface MIC module for SRX5k-MPC	SRX5400 SRX5600 SRX5800
SRX-MIC-2X40G-QSFP	MIC with 2x40GbE QSFP+ Interfaces MIC module for SRX5k-MPC	SRX5400 SRX5600 SRX5800
SRX-MIC-10XG-SFPP	MIC with 10x10GbE SFP+ Interfaces MIC module for SRX5k-MPC	SRX5400 SRX5600 SRX5800
SRX-MIC-20GE-SFP	MIC with 20x1GbE SFP Interfaces	SRX5400 SRX5600 SRX5800

### Transceivers

SRX-SFP-1GE-LH	Small form factor pluggable 1000BASE-LH Gigabit Ethernet optic module	SRX5600 SRX5800
SRX-SFP-1GE-LX	Small form-factor pluggable 1000BASE-LX Gigabit Ethernet Optic Module	SRX5600 SRX5800
SRX-SFP-1GE-SX	Small form-factor pluggable 1000BASE-SX Gigabit Ethernet Optic Module	SRX5600 SRX5800
SRX-SFP-1GE-T	Small form-factor pluggable 1000BASE-T Gigabit Ethernet Module (uses Cat 5 cable)	SRX5600 SRX5800
SRX-XFP-10GE-SR	10-Gigabit Ethernet pluggable transceiver, short reach multimode	SRX5600 SRX5800
SRX-XFP-10GE-LR	10-Gigabit Ethernet pluggable transceiver, 10 Km, single mode	SRX5600 SRX5800
SRX-XFP-10GE-ER	10-Gigabit Ethernet pluggable transceiver, 40 Km, single mode	SRX5600 SRX5800
SRX-CFP-100G-LR4	100GbE LR4 CFP transceiver (IEEE 802.3ba) Transceiver for SRX-MIC-1X100G-CFP	SRX5400 SRX5600 SRX5800
SRX-CFP-100G-SR10	100GbE SR10 CFP transceiver, MMF,100M,OM3 Transceiver for SRX-MIC-1X100G-CFP	SRX5400 SRX5600 SRX5800
SRX-QSFP-40G-SR4	40GbE SR4 QSFP+ transceiver Transceiver for SRX-MIC-2X40G-QSFP	SRX5400 SRX5600 SRX5800
SRX-SFPP-10G-SR-ET	10GbE SR SFP+ transceiver, 200M ET 0-85 Transceiver for SRX-MIC-10XG-SFPP	SRX5400 SRX5600 SRX5800
SRX-SFPP-10G-LR	10GE SFP+ Optical Transceiver, LR	SRX5400 SRX5600 SRX5800
SRX-QSFP-40G-LR4	40GE QSFP+ Optical Transceiver, LR	SRX5400 SRX5600 SRX5800
